

A Quarter Century Ago, We Invented Automotive Just-In-Sequence Manufacturing.

Today You Should See The Sequel: SPD Pro.

Our Fully Integrated Software Solution

25 YEARS

“OUR NAME SAYS IT ALL” has never been a truer statement. That’s because Insequence pioneered the very first sequencing application for an automotive supplier in 1996, ushering in a new manufacturing paradigm called Just-in-Sequence (JIS).

A significant evolution of Just-in-Time assembly, Just-in-Sequence delivers the right parts in the right order at the right time. Our industry-leading JIS software, SPD Pro (SPD stands for Sequential Parts Delivery), frees up space on the manufacturer’s floor, for a safer, more efficient process. Because the next part in the sequence is delivered to the line just as it’s ready for assembly, inventory can be minimized, reducing the cost of storing components. Best of all, Insequence software delivers a big reduction in part handling by assembly line operators, virtually eliminating handling errors because the parts selection is already made, before the part is ready for assembly.

SPD Pro provides suppliers with the unparalleled flexibility, stability, and reliability required for state-of-the-art sequencing operations, and addresses the full continuum of needs with powerful, integrated modules that are under continual improvement.

A Comprehensive Parts Sequencing Solution

Today Insequence software for manufacturers and supply chain providers is used in hundreds of facilities throughout the Americas and Europe. Featuring over 20 standard OEM communication interfaces, SPD Pro orchestrates the entirety of the sequencing process and serves as a complete stand-alone solution that is easily tailored to individual facilities, no matter how complex the requirements are.

Insequence Services, At Your Service

We've made it a top priority to build an essential support network to give customers the critical and necessary resources needed to maintain their operations. We offer reliable 24 x 7 live technical support, onsite and remote system implementation, training, online documentation, and a risk assessment service designed to optimize Insequence systems. With these easily accessible services, you can rest easy. Because when it comes to customer support, our mission is to make the impossible, possible.
